

INTELLIGENT WORKPLACE SOLUTION

Empower. Engage. Enhance.

Intelligent Workplace as a Service:

The Intelligent Workplace as a Service (IWaaS) delivers the benefits of a smarter digital workplace in a consumption-based model.

The IWaaS solution includes the following:

HPE myWorkplace

Mobile app serves as the central hub for employees to connect to their workspaces and colleagues

Wayfinding

Customers may require Aruba Wi-Fi and Aruba ClearPass as prerequisite technologies. Provides indoor location services for employees to get directions to various points of interest or find a colleague

Dynamic Room and Desk Scheduling

Offers dynamic workspace scheduling and check-in features for meeting spaces

Visitor Management

Provides digital guest registration and check-in for lobby areas

Data and Analytics

Offers enhanced utilization metrics on workspace usage and generates insights that help optimize space efficiency

Workplace technology experts at [HPE Pointnext Services](#) provide their solution integration expertise to deliver the hardware, software, and services required for rapid deployment of IWaaS

Intelligent Workplace Solution delivered by HPE Pointnext Services elevates workforce productivity, improves talent retention, and helps optimize space efficiency by creating a dynamic workplace that blends digital tools with physical spaces and generates actionable workplace insights.

TODAY'S WORKPLACE CHALLENGES

The traditional workplace is faced with a number of challenges. Employees have to constantly struggle with technology in order to get work done. Meeting rooms and other workspaces are constantly booked and yet remain unused. Employees often struggle to get visitors the right access to the right business resources in a timely manner.

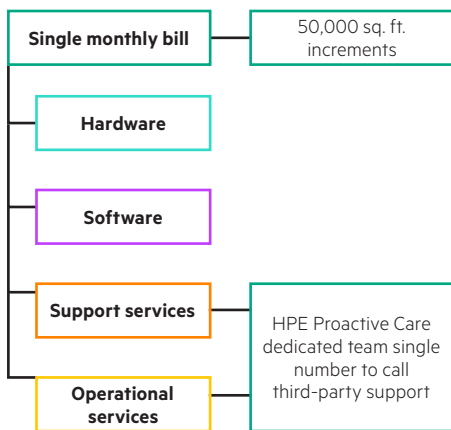

Workplace amenities that need repair usually remain inoperable for several weeks. In fact, due to the fast-changing demands of a dynamic work environment, facilities, and IT teams find it difficult to understand how their workspaces are being used, and as a result, are unable to help improve the employee experience.

**Empower your workforce.
Engage your talent.
Enhance your workplace.**

What if your office or campus:

- Supports mobile-first connectivity, collaboration, and communications
- Knows who you are as you move around the space, triggering personalized action
- Dynamically updates room or area occupancy status in real-time
- Self-configures collaboration technology, making meetings seamless
- Directs you with personal wayfinding to rooms, equipment, or colleagues
- Empowers visitors and guests to participate fully

Solution brief

Today	Tomorrow
Rooms are fully booked but sit empty	Rooms are most effectively used
Typical 10 minutes to start the meeting—initiate call, set up room technology, hunt for cables, and so on	Walk-in and everyone is automatically connected with immediate access to wireless display sharing
Remote and physical attendees have a different experience	Remote and physical attendees have the same experience
Meeting interruptions, as rooms have no signage	Digital signage shows status of room in real-time
Meeting documentation is delayed or doesn't happen	Instant sharing of meeting content immediately after meeting is done
No visibility to meeting room usage metrics	Real estate investment driven by actual meeting room usage metrics
